

Grand Piano

STRING COVERS

EDWARDS STRING COVERS

- Completely cover the strings, soundboard, tuning pins and plate
 - Greatly reduces Rust - moisture doesn't get on the strings
 - Improves tuning stability - moisture doesn't get to the soundboard
 - Keeps the piano clean - dust and debris stay on top of the cover
 - Improves the benefits provided by a humidity control system - keeps the air contained around soundboard.
-

UNIQUE PIANO ACCESSORIES
NOW AVAILABLE**

- 1. Grand Piano String Covers.** Each order custom made with the best woven wool obtainable. These covers are hand-made, attractive, keep the inside of the piano clean and keep the moisture in the air from corroding strings. Supported underneath by Velcro attached cloth covered battens, the cover can (and should) be left in place at all times because it doesn't touch the strings. Proven to be one of the best financial investments a piano owner can make. Over 400 patterns already available, and if necessary, a simple paper pattern can be made by the technician.
- 2. Acoustical Foam Inserts for the underside of grands and the backs of verticals.** First developed and tested by Yamaha for reducing the volume of Disklaviers, they were found to fill a need with traditional pianos as well. A top side foam "pad," sewn in between "two string covers" is also available.
- 3. Dampp-Chaser products.** While the string cover has the ability to lessen the devastation of fluctuating humidity to a degree, complete control is only possible through a Dampp-Chaser System installation. Technicians have found that combined with a string cover, the Dampp-Chaser system becomes even more effective, and tuning stability is greatly enhanced. Testimonials available.

**WHAT PIANO TECHNICIANS
SAY ABOUT EDWARDS
GRAND PIANO STRING COVERS**

...CUSTOMERS LOVE THEM! *All the dust & debris stays on top and it just takes a minute to shake it off outside. It is a real pleasure to see strings that look new after 8 or 10 years of use.*

LaRoy Edwards, RPT

...YOUR STRING COVERS ARE GREAT! *My first proof was a piano at Malibu Beach that "no technician could keep in tune." With the addition of your string cover to the humidity control system that was already installed, the tuning has stabilized completely. I no longer install a Dampp Chaser system without making it "complete" by adding one of your covers.*

Richard Davenport, RPT

...HERE IN OUR BEACH COMMUNITY *the salt air wreaks havoc in unprotected pianos. Your string covers are LIFE SAVERS!*

Russell Brown, RPT

...WHEN EVALUATING PIANOS *for my customers, I find that pianos with your string covers consistently yield a higher appraisal value. The covers really do PROTECT THE INVESTMENT as well as the piano.*

Mark Adams, RPT
